

What You Need to Know About Cyberattacks

No Business is Safe

61% of data breach victims were companies with less than 1000 employees.

A cyberattack occurs every 39 seconds

Email is the primary entry point of 94% of malware attacks.

Cybercrimes increased by nearly 300% following the COVID-19 outbreak

Downtime

40% of small businesses experienced eight or more hours of downtime due to a cyber breach.

60%

of small businesses who are victims of a cyber-attack are unable to recover, and close their doors within six months.

New Employees

New employees are the most susceptible to socially engineered attacks, with 60% of IT professionals citing recent hires as being at high risk.

Phishing

Phishing is a type of cyber attack that involves tricking the victim into revealing sensitive information. Phishing attacks account for 80% of all cyberattacks.

Ransomware

Ransomware is malware that uses encryption to hold a victim's information at ransom. The number of ransomware attacks nearly doubled in the first half of 2021.

Data Backup

Having a reliable data backup is the most effective way to stay afloat after a cyberattack. However, 60% of data backups are incomplete and 50% are unrecoverable.
